Presenting courses from: XYZ University

Remember to include the information listed below:

i. Which prerequisite you are presenting your course as (Biological Science, Cell Biology, Biochemistry, etc)

ii. Course code, title, credit weighting and semester in which it was completed (or planned for future semester)

iii. Course description, including any prerequisites, antirequisites or restrictions

iv. In your zip file, include course outline for each course presented

Biological Science

**BIOL*1230 Biology 1 (0.5 credits) Fall 2015**
This course will define the physiology of the individual as the biological foundation of health and focus on selected studies of health and illness in the adult human. Students will derive an understanding of the biological foundation of their own health as an adult and will be encouraged to expand the concepts and processes of individual health to human populations, animals and the environment.  
Restrictions: BIOL*1111, BIOL*1231

Genetics:

**MBG*2000 Animal Genetics**
Fundamental aspects of animal genetics are covered in this course including the chromosomal basis of inheritance, natural and artificial selection, domestication, epigenetics and quantitative traits.
Prerequisite(s): BIOL*1230 or BIOL*1111

*For planned future semesters, please include full course code, course title and credit weighting.*

**Proposed future semester: Fall 2022**
BIOL*3300 Applied Bioinformatics (0.5 credits)  
HK*2810 Human Physiology (0.5 credits)  
STAT*2040 Statistics 1 (0.5 credits)  
MBG*3100 Plant Genetics (0.5 credits)  
BIOC*3560 Structure and Function in Biochemistry (0.5 credits)
